	Richard Firth	21/06/2017	Information for version 7.5.3.0
	Richard Firth	11/07/2017	Information for versions 7.5.4.0 – 7.5.6.0
	Andrew Wall	05/07/2018	Information for version 7.5.6.0 – 7.6.7.0
	Andrew Wall	06/07/2018	Information for version 7.6.7.0 – 8.0.0.0

Overview

This document contains a list of new features and resolved issues in core Easysite functionality. Please note that releases which only contain custom development commissioned by individual customers are not included in this document. Information on bespoke functionality, and issues resolved in custom development, will be communicated directly to the relevant customer(s).

8.0.0.0

New features

Security: Form user privileges

Form user privileges have been reworked to allow for more clear controls of who see form data.

Administration: Redesign

Administration navigation has been redesigned and restructured to make for a more positive user experience.

User Management: GDPR

New interfaces and informed consent features have been added to aid users in being GDPR compliant.

Events: Date Format

Event date now has multiple date format display options.

Content: Asset – Code Assets

Code asset titles are now displayed as part of the editing process to give better indication of the asset being used.

Content: Page Listers Caching

A new setting has been added to allow content authors and administrators the ability to disable caching for singular listers.

Resolved issues

Directory: Telephone Links

Resolved issue where telephone links added through a rich text area were not displaying correctly to an end user.

Identified: 7.4.7.3

Path Manager - Export

Resolved issue where previously deleted pages were causing path manager export from working correctly. This change should allow users to better visualise paths that require attention without the loss of data.

Identified: 7.4.7.6

Directory: Data Export

Resolved issue where directory asset exports would fail unless they had the everyone read permission.

Identified: 7.4.7.5

Directory: Grid View with Assets

Resolved issue where number of records was not working correctly when users selected this view type.

Identified: 7.5.6.0

Directory: Directory search

Resolved an issue where category selection dividers were valid selections when available as a search filter.

Identified: 7.5.6.0

7.6.7.0

New features

Directories: Google Places Auto Complete

Google Places auto complete is now available within the location selector and all directory search options. **Google API key required**

Template: Sections

Template sections can now be defined and reused across multiple template. New permissions and activity logging with new management options.

Login Element: View and Step previews.

Login element now has two optional view's classic and lean. The new lean view has additional styling features. All login steps have been added to the ribbon bar.

Forms: Element Configuration

Page element configuration for forms has been simplified for ease of use.

Page Comments: Comments Moderation

Page comments moderation can now be auto approved within the element setup with added security option to stop logged in users from amending their details. **Recommended for Intranets only**

Asset Management: Asset Workflow Notifications

Notification emails within asset workflows have been simplified and reworked. The available emails are: Daily Workflow Digest, Steps, Moderation Request and Subscriber Notifications. Each of these emails has an associate template available under **Setup -> Notifications**.

Events: Booking and Cancellation Email Notifications

Notification emails to user booking onto an event have now been added for Event Booking. The available emails are: Booking Request Accepted, Cancellation Request Accepted, and Event Cancelled. Each of these emails has an associate template available under **Setup -> Notifications**.

Templates: Friendly name added to Container elements

The following elements now contain the option to add a friendly name when configuring a Template: Tabs container, Secure container, Cache container, Structure container, Columns.

Authoring: Content > Links - External file links no longer function

Modern browsers have deprecated links to 'file://'. Advisory added to warn authors attempting to create links of this type.'

Resolved issues

Templates – Cascade

Resolved issue where only one cascaded element would be shown as being completed successfully.

Identified: 7.5.6.0

Directory: Search

Resolved issue where keyword search was being applied across multiple directories during a single user session.

Identified: 7.1.0.122

Directory: Assets

Resolved issue with inline images and asset sizes where not being correctly assigned in List, Summary and Grid views.

Identified: 7.1.0.96

Event List View: Description

The event descriptions in list view now show the correct amount of characters that have been defined within the elements config.

Identified: 7.5.6.0

Search Element: Preselect Category Filter

Resolved issue where the 'Get from query string' selection was not being retained on saving.

Identified: 7.1.0.129

Directories: Inline Image: Launch Asset Browser - unable to select asset

Resolved issue which prevented Assets being selected when adding/editing Directory entries in Administration.

Identified: 7.1.0.122

Administration: Content > Assets > Add > Categories - Does not show all folders until a folder is selected or child folders are opened

Resolved issue where the category list does include a scroll bar until one section is expanded.

Identified: 7.1.0.126

Directories: Text area element > Rich-text editor > Text - Formatted text loses formatting in front-end view of directory results

Resolved issue where formatting applied to directory entry records is lost when record is viewed on page.

Identified: 7.1.0.122

Authoring: Attachment > Ordering - Unable to change the ordering of attachments

Resolved issue where drag and drop reordering was not functioning.

Identified: 7.1.0.126

Directory - Inline image > Image size of assets in summary view keeps reverting back to thumbnail

Resolved issue where assets in Directory summary view only render at thumbnail size.

Identified: 7.1.0.96

Forms - ReCAPTCHA > If element is inside Fieldset error is produced on submission

Resolved issue where ReCAPTCHA errors when located inside a Fieldset element.

Identified: 7.4.7.5

7.5.6.0

New features

Resolved issues

Lister: Pagination - Pagination links do not render

Resolved issue where pages were not displaying when 'enable paging' option was selected in Lister element configuration.

Identified: 7.4.7.4

Lister: Show Images > Use Page Avatar - If Avatar not present first image on page should be used but this is not working

Resolved issue where Lister element was not falling back and displaying first page asset if no is present on the page.

Identified: 7.4.7.0

Administration: People > Users - Able to create usernames with special characters but unable to login

Logic changed to allow usernames to contain alphanumeric characters, _., and @. On screen validation message confirms these selections.

Identified: 7.4.7.0

7.5.5.0

New features

Apps: Modules > Forms > Allow button relabelling in Form Element

Form page element updated to allow previous, next, restart and save buttons to be labelled manually.

Administration: Setup > Workflow > Exclude author from step notifications

Workflow now includes an option to exclude the content author from individual step notifications. If this option is selected the author will only receive notification of the outcome of the workflow process.

Resolved issues

Administration: Admin Theme - Background Styling incorrect

Resolved issue where Admin theme wasn't rendering, and users were presented with a grey background.

Identified: 7.4.7.0

7.5.4.0

New features

Apps: Modules > Directories > Quick Search Element to support query of multiple directories

Directory Quick Search element updated to allow search of multiple Directories. For more information, please see: <http://resources.easysitecms.net/knowledge-base/help-articles/easysite7-help-articles/administration/apps/modules/directories/directory-quick-search/>

Resolved issues

[Authoring: Content Editor > Remove Formatting > Adds extra line spacing](#)

Resolved issue where selecting Remove Formatting inserted NBSP into text.

Identified: 7.1.0.126

7.5.3.0

New features

[Apps: Modules > Datastore > Datastore record search](#)

New card view added, and lean markup option available. For more information, please see:

<http://resources.easysitecms.net/knowledge-base/help-articles/easysite7-help-articles/administration/apps/modules/datastore/displaying-datastore-records/datastore-record-search/>

[Apps: Modules > Datastore > Datastore single record view](#)

Lean markup view available. For more information, please see:

<http://resources.easysitecms.net/knowledge-base/help-articles/easysite7-help-articles/administration/apps/modules/datastore/displaying-datastore-records/datastore-single-record-view/>

[Template designer > Popular elements](#)

The template designer ribbon now contains a popular elements tray.

Resolved issues

[Forms: Copy Form > Template - Copied form doesn't contain answers within few elements](#)

Resolved issue where answers to drop-down, radio button and checkbox elements were not copied to copied form.

Identified: 7.1.0.109

7.5.2.0

New features

[Template designer > Move elements from Layout to Legacy tray](#)

Iframe, Article Container and Article Consumer have been relocated to the Legacy tray on the Template designer ribbon. This does not impact on utilisation by exiting Templates.

[Template designer > Legacy tray to be disabled by default](#)

By default administrators will not be able to select Legacy elements for inclusion in Templates. Access to Legacy elements may be enabled via [the Setup interface](#).

Resolved issues

[Forms: Form Comment > Not Configured to display in email notifications - All fields following form comment do not display in email notifications](#)

Changed logic to ensure that form comments render in notification email.

Identified: 7.4.7.0

[Assets: Removed ability to upload Assets to groups without write permissions](#)

Changed logic to ensure that authors cannot upload assets to categories they do not have a write permission for.

Identified: 7.1.0.0

Administration: Message Centre - Blank messages appearing in message centre

Resolved issue where system messages such as confirmation of asset archiving were blank.

Identified: 7.3.6.0

7.5.1.0

New features

Resolved issues

Workflow: Asset Workflow > Token %AssetURL% Link returns error

Resolved issue where the asset URL link in notification email was generating 404.

Identified: 7.3.6.0

Administration > Asset - Error page displayed after clicking the 'Reject changes' button

Resolved issue where rejecting changes in asset workflow generates 404.

Identified: 7.3.6.0

Events: Date range search - 'To' and 'From' fields are the wrong way round

Corrected labeling in Event date search.

Identified: 7.1.0.122

7.4.7.0

New features

Update Bing Maps Service to V8

The Bing Maps AJAX Control Version 7 (AJAX 7) is has been superseded by the Bing Maps V8 web control (V8).

Resolved issues

7.4.6.0

New features

Custom Class Name for Links

If Custom is set as the Class Name, a Custom Class Name text box is displayed allowing the input of a Tag. This text box allows: A to Z, a to z, 0 to 9, and hyphens. The character set must be between and including 3 and 50 characters.

Note: Custom is now the default Class for all link types. However, custom does not apply to Anchor/Bookmarks.

Resolved issues

[Administration: Content > Restore Deleted Pages - Unable to restore deleted pages](#)

Resolved issue where site refreshed, but deleted page was not restored.

Identified: 6.5.15.11

7.4.3.0

New features

Resolved issues

[Forms: Options > Data Export - Fields with identical names have duplicated data in form export](#)

Logic changed so that the data export references field ID, as opposed to field name.

Identified: 7.1.0.119

7.4.0.0

New features

[Forms: Merge Forms and Advanced Forms](#)

Forms and Advanced forms merged into single Forms module.

Resolved issues

[Authoring: Content > Copy From - Copying pages between sites loses links](#)

Resolved issue where if a page was copied to another site in the installation, any links on page were lost.

Identified: 7.1.0.87

[Administration > Event Module- Unable to add the Location to event](#)

Resolved issue where address look up within the Events module was not locating addresses.

Identified: 7.3.6.1

[Polling: Element > Configuration > Show number of votes - Results are being shown even when the option is disabled.](#)

Changed logic to ensure results are displaying correctly.

Identified: 7.1.0.126

[BuildPortal: Portlet > Edit - Attempting to edit portlet results in 404 error](#)

Resolved issue where error is generated when selecting 'Edit portlet contents' function in BuildPortal.

Identified: 7.1.0.122

7.4.0.0

New features

[Administration: Templates: Activity Logging.](#)

Each template now contains an activity tab, detailing which pages use that template.

[Administration: Templates: Audit trail.](#)

Each template now contains an audit detailing the date and time the Template was changed, and the name of the user making the change.

Resolved issues

[Authoring: Content Editor > Remove Formatting > Does not removing formatting and adds extra line spacing](#)

Resolved issue where scheduled the remove formatting function added an extra line break into content. Note: remove formatting does not remove paragraph tags, headings, bullet points, ordered lists, or indent and outdent.

Identified: 6.5.11.3

[Lister: Pagination - Pagination links do not render](#)

Resolved issue where page numbers were not displaying when 'enable pagination' option was selected within Lister element configuration.

Identified: 6.5.11.3

7.3.0.0

New features

[End user activity: Re-captcha - Implement new re-captcha API](#)

Latest version of Re-CAPTCHA available.

[Forms: Form ID included in subject line](#)

When a Form is submitted by an end user, and internal ID number is generated for that submission. To more explicitly link confirmation emails to individual submissions, the ID will be included in the subject line of the email.

[Forms: Friendly label option added to Forms elements](#)

The Forms module allows for multiple fields with the same label, for example 'Name' may be used several times to capture names. However, this can cause issues when column sorting exported data. A friendly name may be used for an element allowing an end user to see a different label from an administrator.

[Forgotten username and password option added to Login element](#)

Ability to retrieve forgotten username added. For more information, see [Login element](#).

[Lister to display document icons](#)

The Lister element will display an icon illustrating the Asset type, when displaying a Feed of assets.

[Path Manager: Export paths](#)

An export option has been added to the Options menu in Path Manager.

[Setup > Workflow > Add or Select existing workflow > Enable 'Step over by Role' without notification](#)

When adding 'Step over by role' to a workflow, the administrator can select whether notifications are sent during the step over.

[Social Bookmarking element updated](#)

The element has been updated to include Google+, LinkedIn and Twitter. The option to open in new window has also been added.

[Templates: Assign a Theme to a Template](#)

Administrators may assign a default Theme to Template.

[Templates: Heading – Assign Class and Unique Identifier to heading element.](#)

Administrators may assign a style sheet class or Unique Identifier to the Heading element.

[Templates: Structure elements allow multiple Divs to be added.](#)

An Add button has been added to the Structure element to allow multiple Divs to be added to an instance of the element.

Resolved issues

[End User Activity: Scheduling > Relocate On - Scheduled relocation doesn't function > 28027](#)

Resolved issue where scheduled relocation was not working.

Identified: 6.5.11.3

[eShop Plugin - Error page gets displayed while configuring some of the eShop Plugins](#)

Logic changed to resolve issue.

Identified: 7.2.0.0

[Administration>Template>Multi Choice Element >unable to delete the Responses and in the set range Questions need relabel as either Answers or Responses](#)

Issue resolved.

Identified: 7.1.0.0

[Update to 7: Columns > Relative > Percentage split - Percentage split defaults to 50/50 split](#)

Logic changed to ensure that original column widths persist after update.

Identified: 7.1.0.117

[Authentication Providers: User filter not applied for login requests](#)

Issue resolved where user filter (for example

'(memberOf:1.2.840.113556.1.4.1941:=CN=App_eMRecTest,OU=Test,OU=eMRec,OU=Groups,OU=WI,DC=wi,DC=scot,DC=nhs,DC=uk)', was ignored and all users imported via the Authentication Provider.

Identified: Not available

[Authoring: Edit > Content Editor > Font - Copy and pasting text causes some formatting to be lost](#)

Resolved issue where Heading formatting lost when copying and pasting in IE11

Identified: 6.5.16.27

[Desktop Uploader: Download - Unable to use application](#)

Resolved issue where Desktop Uploader errored during upload.

Identified: 7.1.0.65

Directories - Links don't render correctly in form comments

Issue resolved preventing links render correctly.

Identified: 7.1.0.118

Forms: Submitted without mandatory data completed

Issue resolved where a Form could be submitted without mandatory fields being completed.

Identified: 7.1.0.87

Easysite 7 Update: Directories > Summary and Listing Page Options > Incorrectly mapped wrong when updated

Resolved issue where options 'Show as link in listing', 'Show as text' and 'Do not show' were incorrectly mapped after upgrading from 6.5.x.x to 7.2.0.0.

Identified: 7.2.0.0

7.2.0.0

New features

Setup

The following interfaces:

- **Content -> Pages -> Options -> Setup**
- **Content -> Assets -> Options -> Setup**
- **Setup -> Site**
- **System -> Configuration**

Now redirect to a single system and site Setup interface. A navigation menu is presented, to allow administrators to navigate manually to a specific interface. Alternatively, if an administrator searches for a term – for example, user – they will be presented with a truncate menu of interfaces related to that term.

More detailed information is available on the Resource Centre:

<http://resources.easysitecms.net/knowledge-base/help-articles/easysite7-help-articles/setup/>

Reverse Caching Proxy module

A Varnish server may now be implemented in conjunction with Easysite. The module allows administrators implement more granular caching rules for an installation.

<http://resources.easysitecms.net/knowledge-base/help-articles/easysite7-help-articles/administration/apps/modules/reverse-caching-proxy/>

7.1.0.119

New features

Resolved issues

[Directories: Configure > Allow A-Z Filtering of records > Enable – Error](#)

Resolved issue where enabling the A –Z option in Directories rendered an error

Identified: 7.2.0.0

7.1.0.118

New features

Resolved issues

7.1.0.117

New features

Resolved issues

[Administration: Workflow > Notification - Assets notifications mail received in the workflow process are different from the Notification template configured](#)

Resolved issue where notifications sent during Asset workflow approval were not configurable via setup -> notifications.

Identified: 6.5.9.9

[End User Activity: Element Configuration - Configuration settings boxes disappear without input selected](#)

Resolved issue where element configuration modal windows close after each configuration change.

Identified: 7.1.0.100

[IE: Asset manager > Add any content type of asset - Cancelling upload leaves blank assets](#)

Changed the logic, to ensure that the asset is not created until the final save.

Identified: 7.1.0.66

[Directories: Link field > Link verification - Verifying a link doesn't display any status of the verification](#)

Resolved issue where the verification option in the Directory Link Field refreshes the page rather than verifying the link.

Identified: 7.1.0.69

7.1.0.116

New features

[Assign a Theme to a Template](#)

Themes may be assigned to a Template so that new pages created using the Template inherit this Theme. Note that the Theme can be changed locally. In addition, the Theme will update if the Theme of a parent page is subsequently cascaded.

Resolved issues

[Directory > Field Titles not displaying since update](#)

Resolved issue where the field labels are not displaying in detail view.

Identified: 7.1.0.115

[Directory: List with assets and show in detail page not working as expected](#)

Resolved issue where Assets added to Directory entries could not be clicked as a link in the Listing view. This also resolves an issue where the Asset still renders in the detail view, when Show in Detail is unselected.

Identified: Not available

[Forms: HTML Range - No indication of value](#)

Resolved issue where HTML 5 Range element does not display the high and low values allocated to it when creating the Form.

Identified: 7.1.0.54

[Authoring: Tabs - Content inside tab not visible when in edit mode](#)

Resolved issue where Tab content was not displayed when in edit mode

Identified: 7.1.0.104

[Authoring: Content Editor > Edit Text > Ctrl+Z - Text replaced by 'undefined'](#)

Resolved issue where text is replaced with 'undefined' if an editor uses CTRL+Z to redo changes.

Identified: 7.1.0.83

[Administration: Content > Assets > Add - Uploading files with comma in filename generates error](#)

Resolved issue where uploading an Asset with a comma in the file name generates a 404 error.

Identified: 7.1.0.86

7.1.0.115

New features

[Canonical tags may be added on a per page basis](#)

Canonical tags are used for SEO to allow different pages with similar content to be grouped together without triggering negative scores for duplicate content or "spamming". Canonicals allow the preferred URL of a page to be indicated to a search engine, for example: `<link rel="canonical"`

`href="https://www.ideagen.com/support/" />`

Canonical tags may be added via the Tags tab. Note: if the canonical contains query string – in the case of a directory entry, for example – an additional checkbox allows for the query string to be included in the canonical.

Directories: Location Selector element

The Google Map connector API has been updated. From 7.1.0.115 new directories will be updated automatically. Existing directories containing the Location Selector will need to be updated: configure the Location Selector element and in the Google maps URL field add:

<https://maps.googleapis.com/maps/api/geocode/xml?>

Resolved issues

ProMotion: Show Images - Images pull through when un-ticked

Resolved issue where the ProMotion element displays an image from the page when the show images option is not enabled.

Identified: 7.1.0.106

Vacancies: Entries > Expired entries - Able to view expired entries on a page

Resolved issue where expired job vacancies are displayed by the Vacancies module page element.

Identified: 7.1.0.108

Administration: Content > Assets - m4v/mp4v file formats not being tagged as a video file

Resolved an issue where m4v/mp4v files are tagged as images rather than video in the Asset Manager. As a result, mp4 files cannot be played.

Identified: 7.1.0.39

Forms: Template > Multi-choice element > Show key/value pair - Disabling this option still shows question and answer in the detail page

Resolved issue where label shows in detail page when display option is not selected.

Identified: 7.1.0.57

Administration: Reports > Workflow > Awaiting approval - 'Waiting approval' doesn't match

Resolved issue where Workflow report is incorrectly reporting the number of pages awaiting approval.

Identified: 6.5.16.23

Authoring: Assets > Video > Movie Options > Autostart Playback - Disabling autostart playback doesn't stop video from auto-playing

Resolved issue where videos auto-play when the auto- start option (edit -> select asset -> update -> movie options) is disabled.

Identified: 7.1.0.39

Events: Template > Long text - HTML appearing in text for links

Resolved issue where HTML is rendering in links added to the long text element.

Identified: 7.1.0.103

7.1.0.114

New features

[Option to disable moderation of page comments added](#)

Note that to use this option all other comments settings must be deselected. In addition, the ability for users to change their first name, surname and username must be disabled via the My Account element.

Resolved issues

[Administration: Content > Feeds > Filters - ordering always uses ascending regardless of configuration](#)

Resolved an issue where feeds always show in ascending order. When ordering by creation date this will display oldest content first.

Identified: 7.1.0.113

7.1.0.113

New features

Resolved issues

[Templates > Cascading Lister Styles - Cannot cascade](#)

Resolved an issue preventing Lister theme changes being cascaded to pages when configuring the Lister element on a template.

Identified: 7.1.0.108

7.1.0.112

New features

Resolved issues

[Lister element: NullReference Exception](#)

Resolved issue identified in Lister element when updating to 7.1.0.111

Identified: 7.1.0.111

[Administration: Feeds > Popularity order - Ordering by popularity doesn't list pages in popularity order > 27298](#)

Resolved issue preventing items in feeds ordered by popularity from displaying in order of popularity.

Identified: 7.1.0.80

[Google Maps: API Key Needed](#)

Updated Administration -> Setup -> Location Services to allow entry of new Google Maps API key.

Identified: 7.1.0.105

7.1.0.111

New features

Resolved issues

[Attachments: Inline details window won't allow changes to the title](#)

Resolved an issue where if the details of an attached asset – such as the title – were updated, these could not be saved.

Identified: 7.1.0.40

[Studio error resolved](#)

Issue resolved causing the studio to error when selected;

Identified: 7.1.0.97

[Promotion Module: 404 error message gets displayed when promotion element added to the page](#)

Issue resolved where a 404 error was being generated if ProMotion was added to page and configured.

Identified: no information

7.1.0.110

Note: 7.1.0.110 was not issued.

New features

Resolved issues

7.1.0.109

New features

[People: Users - Add activity info to user profile](#)

Additional information has been added to the user profile. When viewing a user account (Administration -> People -> Users), the following information is now available for the user:

- Date joined
- Date of first login
- Date of last login

Resolved issues

[Discussion Forum: Delete button - button is missing](#)

Resolved an issue where the delete posts button is not rendering in the Discussion Forums module.

Identified: Not known

[External link asset: Port number doesn't change if you change the link to https or to http](#)
External URLs saved as Link Assets were not using the correct port number if the URL is amended to either https or https. This was resulting in a 404 error if the URL was clicked. The logic has been updated to ensure the correct port number is used for the URL.

Identified: 7.1.0.5

7.1.0.108

New features

N/A

Resolved issues

[Authoring: Link path > Changed link path - Trailing slash doesn't redirect user](#)

If the link path to an existing page was updated, the previous URL should redirect to new URL. Redirects were functioning as expected when the old URL was entered without trailing slash, but not with a trailing slash. The behaviour has now been standardized so redirects function irrespective of trailing slash.

Identified: 7.1.0.50

[End user activity: Asset External Link - Description doesn't show when in a Lister](#)

When a feed of external links was displayed in a Lister, the summary was not populating. The description field of the asset will now populate the summary in the Lister.

Identified: 7.1.0.104

[My Account > Users are able to remove data from mandatory fields and update record](#)

Users were able to remove data from mandatory fields and save a blank field. Validation is now in place to prevent blank mandatory fields being saved.

Identified: 7.1.0.105

7.1.0.107

New features

[Support added for MD5 encryption on Worldpay Transactions](#)

Support added for WorldPay enhancements to MD5, a security feature which prevents unauthorised tampering of the transaction submission parameters,

Resolved issues

[Membership: Membership Directory element forcing out to the left from A-Z filter](#)

Resolved issue where selecting a letter from the A -Z forces the directory element full width of the page, irrespective of any structure elements such as columns.

Identified: 7.1.0.99

7.1.0.106

New features

N/A

Resolved issues

[eShop: ITEM token passes incorrect weight](#)

Removed weight information from the eShop confirmation email. The information provided was incorrect as the Product weight is recorded in grams. However, the email labelled this as kilograms.

Identified: 7.1.0.100

[Events: Template > Long text - HTML appearing in text for links](#)

Resolved issue where HTML was appearing in link text, where a link was created in the Long Text element.

Identified: 7.1.0.103

[Users: Export – 404 generated when including registration data in export.](#)

Further changes made to avoid time out issues when dealing with large numbers of users.

Identified: 7.1.0.66

7.1.0.105

New features

Resolved issues

[eShop: Billing address postcode lookup doesn't populate City](#)

Resolved issue where when a user enters a valid postcode, clicks 'Find' and selects an address from the list, the City field isn't populated. The City field is mandatory therefore the user was required to manually complete the city field in order to proceed with the transaction. The city field is now pre-filled by the selected address.

Identified: 7.1.0.103

[Users: Event attendees removed from group on login](#)

The Event module allows users who have booked onto an event to be added to a nominated group, which in turn allows the user to access restricted content. An issue was identified on sites with Active Directory synchronization enabled: membership of event specific groups was removed as A.D. synced overnight. A change has been made to ensure that only groups created in A.D. are updated during Active Directory synching.

Identified: 7.1.0.103
